

SICURTOP
MULTIPOINT GEAR LOCKS

Open, Close, Live

The best way to close the door

SICURTOP is the ideal locking system for entrance and garden doors. It can be installed on wood, PVC or aluminium/wood sashes. The locking points, suitably distributed on the forend, ensure an excellent resistance against break-in attempts. Especially, the patented lock **Poseidon**, where lower and upper hooks close on opposite directions and avoid the unhinging of the door by means of lifting or removal of the rebate from the frame.

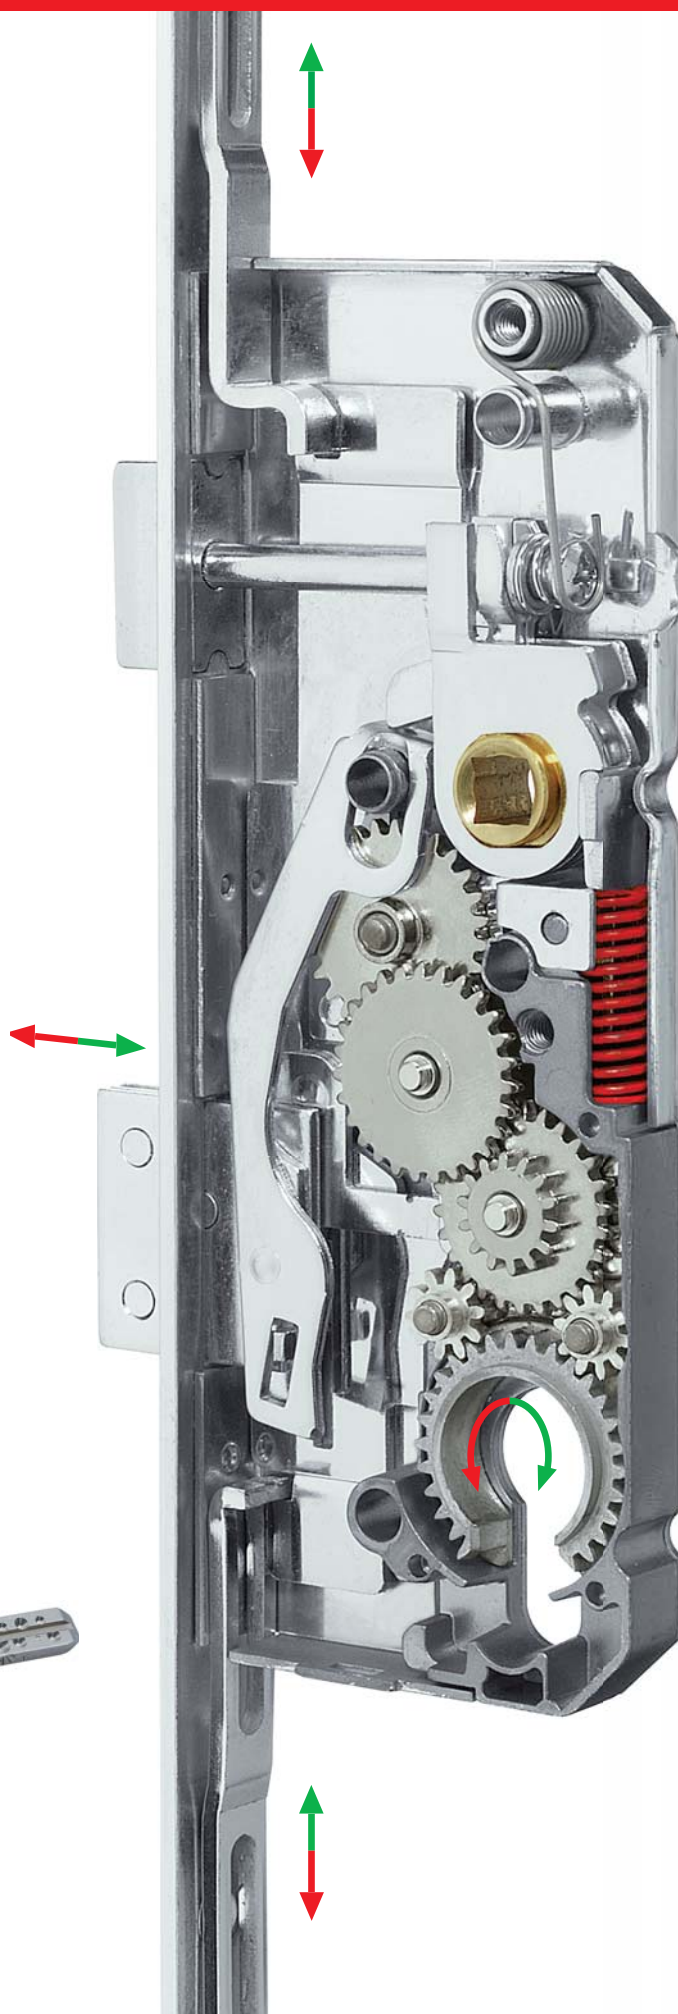

The strength of steel and clockwork precision

The key operates all the locking mechanisms by means of a gear drive, greatly reducing the effort required to compress the seals and compensates for slightly warped sashes. For the production of the main gears AGB adopts a new exclusive technique: instead of the traditional zamak or sintered steel, the Sicurtop gears are made of cold-pressed steel and are therefore much stronger. This construction system and the accurate design of the kinetic motions guarantee the perfect smoothness of operation and the lifetime performance of the lock.

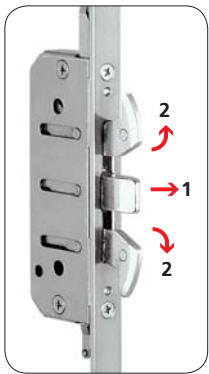

Technical characteristics

- Complete closure with two turns, thanks to a gear drive mechanism made of cold-pressed steel. The sturdy and resistant gear teeth ensure precision and durability. No maintenance is required. The movement of the device is irreversible: once they slide out, the bolts cannot be pushed back in.
- Sintered steel spring latch, bevelled and convex on both sides to reduce friction at closing.
- Bolts made of pressed steel plates, 20 mm throw (for backsets above 40 mm).
- Cylinder-fastening screw supplied with the lock.
- 8 mm brass follower, with sturdy counter-spring to support even the heaviest handles.
- Total locking cam stroke: 20 mm, downstroke when closing.
- European profile cylinder hole. Designed to house cylinders with anti-pull cam.
- Holes for fitting handle plate, escutcheon and rose with through screws.
- Protection bushings on the case's through holes.
- Only 18 mm distance between cylinder axis and outer edge of case, for improved efficiency on PVC and wood/aluminium profiles.
- Silver finish.
- 1900 to 2400 mm lengths.
- 85 and 92 mm lock centres
- 35 to 80 mm backsets.
- 16 or 20 mm steel forend.

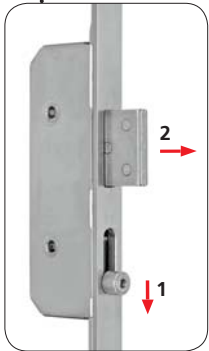

Details that make the difference

Poseidon

Patented lock where hooks and bolts are made of solid steel blades in order to guarantee maximum strength and security to the balcony door.

Roller cam and bolt

The locking cam completes its run before the bolt slides out. This way the uprights are perfectly aligned, preventing any friction when the bolt slides out.

Telescopic mushroom cam

Made of steel and specially shaped to increase the resistance when closing.

Adjustable roller cam

The number and distribution of the roller-head cams are optimised in relation to the length and model of the lock. The revolving brass jacket ensures the smooth sliding of the cam inside the striker.

Intermediate locking point

Central lock with roller-type spring latch
Especially designed for push-open doors.

Central lock

Central locking point with spring latch bevelled on both sides
Thanks to its special design, it always guarantees the perfect closing of the door.

Intermediate locking point

Hardware for every solution

Adjustable hinges

We recommend the use of adjustable hinges on main entrance doors furnished with Sicurtop locks. By means of easy adjustments on three axis, the AGB adjustable hinges guarantee the ideal position of the door, the perfect tightness of the seals and the correction of any structural settling. Our technicians will be glad to show you the most convenient solution among the large number of models available.

ZENIT
Adjustable hinges for wood
with 4 threaded pins

TOP
Adjustable hinges for wood
with 2 threaded pins

3D
Adjustable hinges for wood
with 2 threaded pins

COMPOSIT
Adjustable hinges for
PVC and aluminium/wood

SCUDO DCK

SCUDO 9000

SCUDO 5000

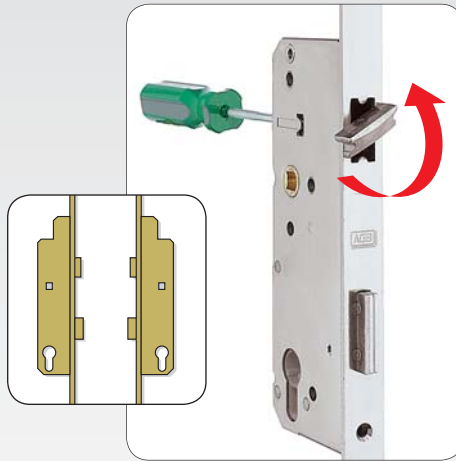

MOD. 600

CARTESIO
Adjustable hinges for PVC

The spring latch is easy to reverse using a common screwdriver.

Cylinders

Sicurtop is designed to house a standard European profile cylinder, for example the AGB SCUDO series or U-Tech security cylinders. The cylinder also controls the spring latch, so that a fixed handle is normally used on the outside.

U-TECH

TENAX ROUND and OVAL
Protective rim guard for cylinders

A complete range of strikers

A large number of striker models to satisfy all your needs. The solution with steel strikers and corresponding adapters also allows for the application of Sicurtop on most common PVC profiles.

Electric strikers

- 1 long wing
- 2 half wing

Adjustable strikers latch + bolt

- 1 for rebated doors
- 2 for flush doors

Poseidon strikers

- 1 adjustable for rebated doors
- 2 adjustable for flush doors
- 3 fixed for flush doors

Cam+bolt strikers

Telescopic mushroom cam strikers

Roller cam strikers

Strikers for push rods fixed and adjustable

Steel U30 Strikers for PVC profiles

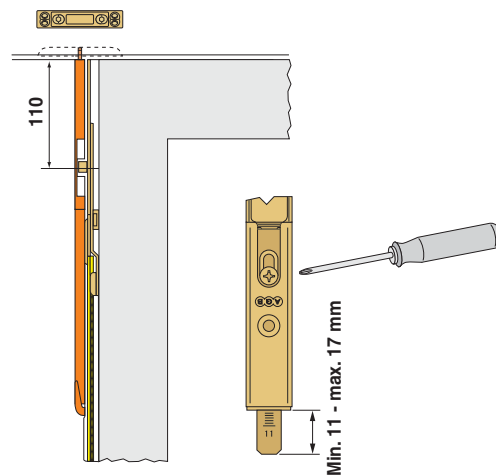

NB. The whole range of strikers is reported in the price list in force.

One-piece strikers and bolts

- ❶ **One-piece bolts for Poseidon**
U18 (a), U26 (b) for double sash
- ❷ **One-piece adjustable strikers for Poseidon**
U18 (a), U30 (b), U26 (c) for single sash.

- ❶ **Upper and lower lever bolts with adjustable shoot bolt**
18 mm forend with frontal lever and adjustable shoot bolt
Available in 210, 300, 400 and 600 mm length.
- ❷ **Upper and lower lever bolts with cam striker and adjustable shoot bolt with cam striker included**
18 mm forend with frontal lever and adjustable shoot bolt.
Available in 360 and 550 mm length.
- ❸ **Lower lever bolts with Poseidon striker and adjustable shoot bolt with Poseidon striker included**
18 mm forend with frontal lever and adjustable shoot bolt,
available in 390 length.
- ❹ **Upper and lower round lever bolts**
18 mm forend with side lever. Available in 180, 200, 300 and
400 mm length.

- ① Extension with Poseidon box
- ② Extension without Poseidon box
- ③ Extension with bolt + roller cam
- ④ Extension with mushroom cam
- ⑤ Extension with roller cam
- ⑥ Extension without roller cam

- ① Lower roundbolt
- ② Upper roundbolt with reverse gear
- ③ Upper terminal with mushroom cam
- ④ Upper terminal with roller cam
- ⑤ Lower terminal without bolt

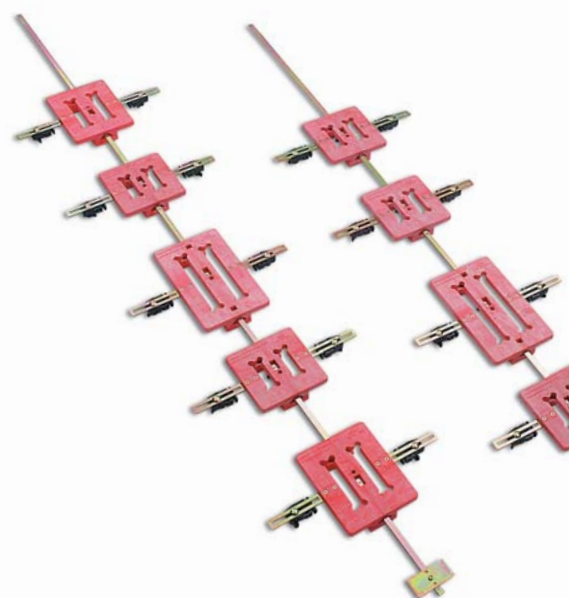

The ends of the Sicurtop rods can easily be trimmed to suit the height of the door.

AGB Service

SICURTOP is supplied with a complete set of jigs which make assembly of the locks and strikes easier and more precise.

Complete and detailed technical instructions are available for the SICURTOP system, as well as competent customer service. Moreover, the AGB technicians are always ready to listen to your problems and offer solutions. Our large experience, excellent service and commitment to "Total Quality" are all very good reasons to choose the AGB products.
